

SPECIALTY GUIDELINE MANAGEMENT

KORLYM (mifepristone) mifepristone

POLICY

I. INDICATIONS

The indications below including FDA-approved indications and compendial uses are considered a covered benefit provided that all the approval criteria are met and the member has no exclusions to the prescribed therapy.

FDA-Approved Indication

Indicated to control hyperglycemia secondary to hypercortisolism in adult patients with endogenous Cushing's syndrome who have type 2 diabetes mellitus or glucose intolerance and have failed surgery or are not candidates for surgery.

Limitations of Use: Should not be used in the treatment of patients with type 2 diabetes unless it is secondary to Cushing's syndrome.

All other indications are considered experimental/investigational and not medically necessary.

II. DOCUMENTATION

Submission of the following information is necessary to initiate the prior authorization review: pretreatment hemoglobin A1C level (for initial requests)

III. CRITERIA FOR INITIAL APPROVAL

Cushing's syndrome/disease

Authorization of 6 months may be granted for treatment of Cushing's syndrome/disease when all of the following criteria are met:

- A. Member has type 2 diabetes mellitus or glucose intolerance
- B. The requested drug is being prescribed to control hyperglycemia secondary to hypercortisolism
- C. Member has had surgery that was not curative OR member is not a candidate for surgery
- D. If the member is able to become pregnant, a negative pregnancy test is required before initiating therapy

IV. CONTINUATION OF THERAPY

Cushing's syndrome/disease

Authorization of 12 months may be granted if the member has achieved or maintained an adequate positive response, or there is improvement in signs and symptoms of the condition.
