

TOPICAL ROSACEA AGENTS

Finacea (azelaic acid), Mirvaso (brimonidine), Noritate (metronidazole), Rhofade (oxymetazoline), Soolantra (ivermectin)

RATIONALE FOR INCLUSION IN PA PROGRAM**Background**

Finacea (azelaic acid), Mirvaso (brimonidine), Noritate (metronidazole), Rhofade (oxymetazoline) and Soolantra (ivermectin) are used for the topical treatment of rosacea. Rosacea is a chronic relapsing inflammatory skin disorder which mostly affects the central face. Persistent facial redness is cited as the most common sign of rosacea and may resemble a flushing or sunburn that does not go away. Mirvaso and Rhofade are alpha adrenergic agonists that can reduce facial redness through direct cutaneous vasoconstriction. The mechanisms by which Finacea, Noritate and Soolantra act in reducing inflammatory lesions of rosacea are unknown (1-6).

Regulatory Status

FDA-approved indications: (1-5)

- Finacea is indicated for the topical treatment of inflammatory papules and pustules of mild to moderate rosacea.
- Mirvaso is indicated for the topical treatment of persistent (non-transient) facial erythema of rosacea in adults.
- Noritate is indicated for the topical treatment of inflammatory lesions and erythema of rosacea.
- Rhofade is indicated for the topical treatment of persistent facial erythema associated with rosacea in adults.
- Soolantra is indicated for the topical treatment of inflammatory lesions of rosacea.

Safety and effectiveness of the topical rosacea agents in pediatric patients under 18 years of age has not been established (1-5).

Summary

Finacea (azelaic acid), Mirvaso (brimonidine), Noritate (metronidazole), Rhofade (oxymetazoline) and Soolantra (ivermectin) are used for the topical treatment of rosacea. Rosacea is a chronic relapsing inflammatory skin disorder which mostly affects the central face. Persistent facial redness is cited as the most common sign of rosacea and may resemble a flushing or sunburn that does not go away. Mirvaso and Rhofade are alpha adrenergic agonists that can reduce facial redness through direct cutaneous vasoconstriction.
