

Specialty Guideline Management

Inlyta

Products Referenced by this Document

Drugs that are listed in the following table include both brand and generic and all dosage forms and strengths unless otherwise stated. Over-the-counter (OTC) products are not included unless otherwise stated.

Brand Name	Generic Name
Inlyta	axitinib

Indications

The indications below including FDA-approved indications and compendial uses are considered a covered benefit provided that all the approval criteria are met and the member has no exclusions to the prescribed therapy.

FDA-approved Indications

First-Line Advanced Renal Cell Carcinoma

- Inlyta in combination with avelumab is indicated for the first-line treatment of patients with advanced renal cell carcinoma (RCC).
- Inlyta in combination with pembrolizumab is indicated for the first-line treatment of patients with advanced renal cell carcinoma.

Second-Line Advanced Renal Cell Carcinoma

Inlyta as a single agent is indicated for the treatment of advanced renal cell carcinoma (RCC) after failure of one prior systemic therapy.

Compendial Uses

- Relapsed or stage IV renal cell carcinoma
- Papillary, Oncocytic (Hürthle cell) or Follicular thyroid carcinoma
- Soft tissue sarcomas: alveolar soft part sarcoma (ASPS)
- Thymic carcinoma

All other indications are considered experimental/investigational and not medically necessary.

Reference number(s)
2079-A

Prescriber Specialties

This medication must be prescribed by or in consultation with an oncologist.

Coverage Criteria

Renal Cell Carcinoma

Authorization of 12 months may be granted for treatment of advanced, relapsed, or stage IV renal cell carcinoma when any of the following criteria is met:

- Inlyta will be used as a single agent
- Inlyta will be used in combination with pembrolizumab
- Inlyta will be used as first-line treatment in combination with avelumab

Papillary, Oncocytic (Hürthle cell), or Follicular Thyroid Carcinoma

Authorization of 12 months may be granted for treatment of progressive and/or symptomatic papillary, Oncocytic (Hürthle cell), or follicular thyroid carcinoma that is not amenable to radioactive iodine (RAI) therapy.

Soft Tissue Sarcomas

Authorization of 12 months may be granted for treatment of alveolar soft part sarcoma (ASPS) subtype of soft tissue sarcoma when used in combination with pembrolizumab.

Thymic Carcinoma

Authorization of 12 months may be granted for treatment of thymic carcinoma when both of the following criteria are met:

- The requested medication will be used as subsequent therapy or in members who cannot tolerate first-line combination regimens.
- The requested medication will be used in combination with avelumab.

Continuation of Therapy

Authorization of 12 months may be granted for continued treatment in members requesting reauthorization for an indication in the Coverage Criteria section, specific to diagnosis, when there is no evidence of unacceptable toxicity or disease progression while on the current regimen.
